- Shall provide expertise on multiple phases of a project lifecycle from concept development to solutions design, implementation, optimization, and support.
- Design/develop high-quality websites/blogs.
- Create software programmers using **Java, PHP etc.**
- Understanding of front end design and development.
- Communicate with external/internal stakeholders.
- Assess different issues and generate feasible ideas to solve them related to our company's objective.
- Design new products that complement the newly generated ideas and consider multiple ways that the product can be tailored to solve complex problems.

Skills Required:

- Knowledge of programming language **PHP/C/Java**.
- Must have very clear concept on **Object Oriented Programming (OOP)** and **MVC**.
- Must have good knowledge about **MariaDB/MySql**.
- Innovative, creative and must be an out-of-the-box thinker
- Ensure that development progress is within expected guidelines and is completed on time
- Smart + Good written and verbal communication skills
- Ability to maintain an upbeat and positive attitude at all times
- Ability to work in a self-directed, fast-paced (nimble) environment
- Knowledge on Web technologies such as **HTML, Bootstrap, CSS, JavaScript, jQuery, Ajax**
- Good at critical problem solving and software testing
- Knowledge on Android/IOS development

Good to Have:

- Understanding of Agile Methodologies
- Prior expertise in web development
- Understanding of Blockchain related software, such as Solidity.
- Knowledge on Slim framework

Qualifications: B.E / B.Tech / B.Sc in Computer Science Engineering or a related subject.

Experience: 2-4 year(s) experience is preferred.
Interested candidates are requested to apply by sending their CV (must attach your one recent photo) along with a cover letter via email to **career@connectingdot.in** with the subject line "**Application for the Position of Software Development Engineer**".
